

Indonesia

Summary of country engagement at SWA

Priority country : Political prioritization

Indonesia joined SWA in 2017. In Indonesia, under the leadership of the Government of Indonesia, development partners provide valuable contributions in the WASH sector. Active communications and coordination among governments and development partners are conducted at (i) planning stage through both formal mechanism to register planned loans and grants into governments system and National WASH Working Group; (ii) implementation stage through regular meetings conducted by line ministries or Sanitation Partner Group; and (iii) evaluation & monitoring stage through regular reviews on projects funded by loans or grants. Sanitation Partners' Group (SPG) is established in Indonesia as a coordination forum between development partners in sanitation development in the country. There are a lot of efforts to develop programs and bringing on innovations, including development of indicators, tools and instruments for data collection which are aligned with WASH-related SDGs indicators.

Commitments by the government

Commitment	Body / Organizations	Target Year	Progress Description	Constituency	Progress
Develop climate-resilient WASH sector investments and infrastructure to support green economy.	Ministry of National Development Planning (Bappenas)	2023		Government	Reviewing prog
